“Perfection, Light, and Life”

Editorial

Dear Colleagues,

It gives me great pleasure to present this news letter on the second anniversary of our company

If you recall our first News Letter presented on 28th Feb 2007, we had informed about our work profile and the technology partners with a brief description of their Products

This letter is a compilation of events, products & partners added during the year and also a summary of our orders executed. Needless to mention data will speak for the voluminous growth that our company has achieved during these two years

Company Vision and the commitment of management team and all the employees has been the main source of our stepping on this platform

Let us all jointly endeavour to take our company to such heights where every individual feels proud to be member of Fleurdelis family.

Just to Update

Fleurdelis has grown into a matured company in the following area

OSMD (Onsite Machining Division)

Consists of Climax Portable Machine tool

Climax Pioneering innovation in Portable machines and machining to help customers maximize the productivity of their people, equipment, tools, and processes. Drawing on our experience in many industries, we've become a trusted global resource for assets ranging from

standard and custom tools that solve individual machining problems to expertise in optimizing enterprise-wide systems, processes and skills.

SELF LEVELING MACHINES INDIA is an alliance company between FLEURDELIS TECHNOLOGIES PVT LTD and SELF LEVELING MACHINES, AUSTRALIA

S E L F LEVELING MACHINES INDIA is an o n - s i t e

machining company specialized in machining very large circular and irregular shaped surfaces on structural components. There is virtually no size limit because our milling cutters are

2nd Year Anniversary Issue

controlled by a scanning laser plane and are independent of any deflections which might occur in the portable machine frame. This allows large structures to be machined in a single set up with accuracy similar to those achieved on major workshop machines. Our equipment is readily portable for any large size on site machining.

Magbroach

We along with Magbroach introduce a

new generation of electro-magnetic drilling and broaching machines.

DWT

BABCOCK has developed portable pipe beveling machines with the know-how of their own people on-site. DWT GmbH in Essen, Germany is the license manufacturer of Babcock portable pipe bevelers for weld preparation and orbital welding of pipes or boiler tubes as well as panel walls and delivers a unique product range worldwide. The product range of pipe beveling machines for pipe end prep weld preparation is outstanding and very competitive due to following advantages: extremely low weight due to aluminum

It takes a lot of courage to show your dreams to someone else.

construction, fast and secure clamping, high power ratio, rugged and compact design, easy and safe to operate and very flexible for multiple operations

Laser Surveying using Faro Technology

Offering you a brief insight into how FARO products are being applied

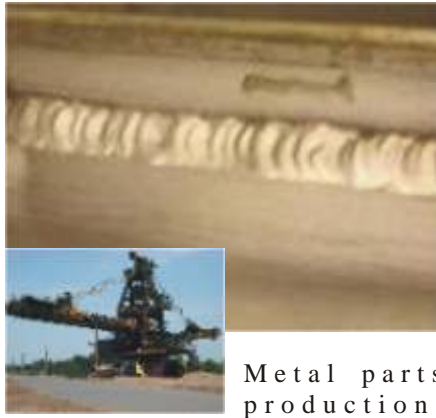

and providing daily improvements in production quality. Here are just a few of the varied applications found in today's production environment and our specialized solutions.

Fleurdelis has invested to grow in the following area

RSED (Reclamation and Surfacing Engineering Division)

xpert

xpert Alloys are specially engineered for application specific reclamation & surfacing solutions for all mechanical parts in core industries like Steel, Cement, Mining, Petrochemicals, Heavy Engineering, Defence, Ship Building

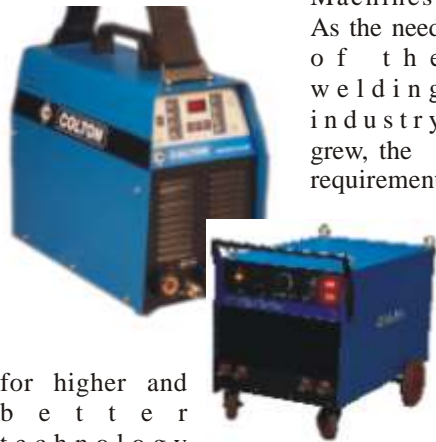

Metal parts production, Railways etc.,

xpert alloys are made to high performance standards for high Strength, Wear, Corrosion & Temperature resistance applications.

Colton Fleurdelis

Fleurdelis in partnership with COLTON Industries provide range of latest welding & cutting equipment to Indian market. COLTON Industries was established in the year 1978 by Mr. Clifford Oliver, to cater to the welding industry. The main activates were manufacturing Welding transformers, Rectifiers & Submerged Arc Machines.

As the need of the welding industry grew, the requirement

for higher and better technology

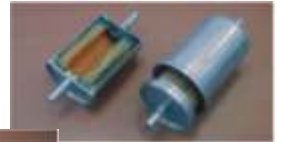

welding machines became a necessity. With the concept in mind, the company also diversified into manufacturing of High Technology Welding & Cutting Machines.

WCAD (Welding and Cutting Automation Division)

Pulsar

Pulsar Ltd.™ provides innovative manufacturing solutions that enable companies to manufacture products using a wider range of materials, faster and at significantly less cost than ever before. The Company's solutions are based on

magnetic pulse technology. They present a breakthrough by

enabling dissimilar material combinations to be welded together and materials to be formed with fewer processing steps, in a cleaner environment, while delivering better quality than any conventional welding, brazing or forming process.

Soitaab

Column & Boom Manipulators are designed to work independently or in conjunction with rotating and/or positioning equipment to locate an Automatic Welding Head in the correct position over the work-piece to achieve the necessary down hand weld. They can also be used in conjunction with Cutting Machine Installations, Semi-Automatic Welding Installations and for supporting Grinding Heads. Column & Booms allow the use of fully automated

production techniques which increases quality and reduces production time and operator fatigue. Column and boom positioner with horizontal sliding boom (fixed boom on request) the base can be either fixed or powered and travels on rails.
